

# BIOREGISTRA FOR SECURITY

## About Seamfix

Seamfix Nigeria Limited is an innovative technology solution company that plays a key role in helping to meet the global growing demand for identity management, process automation as well as service support solutions across all sectors. As leading providers of technology solutions and services in the Nigerian and larger African market, our systems empower our clients to derive maximum value, deliver value to their customers, solve challenges and stay ahead of the competition.

## Security Industry challenges

Our research on the private security service industry indicated challenges bordering on data and identity management, some of which are depicted in scenarios below:

1. Monitoring teams go out to conduct routine/random inspections, only to find that operatives have replaced themselves with a look-alike family member.
2. An operative was sacked at the Calabar branch of a security company in February due to incompetence on the job. He changes his name and relocates to Lagos where he applies and gets employed by the same security company because their data is not harmonized.
3. Guards' rosters are signed fully and 'dutifully' before staff is paid, but recent random inspections have shown that 30% of those who signed the rosters don't 'exist' on site. Ghost staff, strange faces in company uniform, no 'unique' identification; the company was losing money and credibility in February due to incompetence on the job. He changes his name and relocates to Lagos where he applies in the Lagos branch of XYZ security company. Leonard is again employed by the same company because their data is not harmonized, who knows what next will happen.

4. Operatives fill forms and stamp their fingerprints, but each form joins the growing stack that just sits in the file cabinet. Monitoring teams must search through the stack to find the file of one operative, just to verify one piece of information.

5. An operative submitted an unclear passport photograph, making it difficult for monitoring teams to be sure if they're talking to the person they hired, or their 'brother'.

The case studies are adaptations of current real-life scenarios; scenarios that the security industry can curb using **BioRegistra**

## Our Unique Proposition

BioRegistra™ is an innovative data capture and identification platform developed primarily for individuals or businesses like yours to enable you to capture and store any form of data relevant to you (**textual, fingerprints and/or pictures**).

## Benefits of BioRegistra to Security Industry

### Phase 1

- Automated capture of Staff data, including Biometric information
- Identify and Verify staff or their information on the spot
- Captured data can be used for identity cards
- Online & offline capture capability
- Provide uniformity of captured information in the organization nationwide
- Automation and digitization of all forms
- Holistic KYC data capture solution.
- Field agents/supervisors can capture staff using android phones
- Real-time synchronization of data- so it can be viewed back-end from anywhere
- Data is encrypted and secured with cloud technology
- Roll out of statutory reports eased with automated data
- Fraudulent data capture prevention
- Controlled multi-Agent access
- Portraits conform to the highest KYC standards

### Phase 2

To allow ease of enrolment, identification, and deduplication of security operatives nationwide, BioRegistra can be used to capture profiles of all security service providers and their personnel using the same format into a segmented cloud space. This data, under the administration of the security industry regulatory body, would then be accessible to registered security companies for enterprise and other planning activities. This would facilitate personnel tracking across companies (companies can easily cross-check the credentials/background of an applicant against the database, but the data of each company remains accessible by that company alone

## Our BioRegistra solution also offers the following-

- Mobile (Android) and Windows-based live data capture solution
- Agent Management and field deployment management features
- Data can be used for enumeration and identification
- Data capture is encrypted, saved and secured with cloud technology
- Platform also has the deduplication feature to help curb fraud by flagging duplicate records
- Enhances data capture with geo-location tagging of such data
- Enables configuration to capture any parameter including pictures and even fingerprints if need be
- Automation and digitization of manual processes
- Real-time monitoring of field activities (from the office)
- Offline capture where there is no internet connection
- Simple API which allows you retrieve your data to other systems with few lines of code
- Data export to any format provides ease of use of data for decision
- Platform generates CRM reports and search on any required parameter
- Ease of data capture and accessibility
